Sl No.	Name	Aptitude Test	JAM/GD	Interview experience	Technical Subjects	Other Comments
1.	S.K YUKTA SWAMY	There were around 10-20 basic aptitude and reasoning questions along with this there were two coding question one was of average difficulty level second one was difficult.	There wasn't any JAM/ GD round	Overall the interview experience was very good.They concentrated on the projects we have done. We were assigned two panelist and technical and HR was held simultaneously. They gave more priority towards our technical knowledge and skills we have implemented in our projects and overall personality test took place.	They had asked about basic theoretical knowledge about various programming languages. Where we have implemented them. They had asked a coding question which we were supposed to execute on Spot.Coding question was about list and arrays so if we are clear with basic concepts we can answer them correctly.	Well we should be confident and honest about what are the skills we possess and knowledge we have.Im sure if we give our best we can definitely crack the interview.
