Accenture

Sl No.	Name	Aptitude Test	JAM/GD	Interview experience	Technical Subjects	Other Comments
1	Surabhi M	After the registrations were done we had the first round that was Aptitude test. So this round was a combination of verbal, critical reasoning and abstract reasoning, applications of MS office, network security and clouds and few pseudo codes put up to 90 questions 1:30 minutes. This round was pretty easy many reasoning topics were thought in college through TYL classes. After this round withing 2-3 mins we got the result , this was a elimination round, clearing this would take us to the next round which was coding where in we	There was no GD, but we did have a communication round. People who cleared coding round got a mail for this round. So in this round we were asked to repeat a few sentences ,read them out and answer few question this was just to check the fluency and listening skills . It was very easy.	So after communication round we were called for the interview based on the slots we choose. Firstly we need to be sure with whatever we have added on our resume and questions were asked based on it. The questions were like introduce yourself then they asked me to give a brief explanation about my projects many questions based on scenario were asked like how did you handle any conflicts during your project : we shouldn't tell no, so I explained telling that we would put up all our ideas and come up with the best solutions seeing everyone's interests, being positive is very important and some of the questions based on what I would like to study on or my interests in the upcoming technology was asked. It was a great experience overall answering confidently matters a lot and being sure with whatever we know and put on resume, how we explain our project also plays a very important role.	Data Structures and Algorithms, DBMS, Operating System, Networking, OOPs concepts and programing language of your choice.	Overall it was a positive and a great experience. The HR and everyone were very comfortable to communicate with people with top notch performance got a package of 6.5lpa and we received the LOI on the day of results itself. It really was a great opportunity and did help a lot in soft skills development as well.

		had to code 2 programs within 45 minutes where in one of the questions was based on trees And we had to pass 2 test cases , the programs were moderate.				
2	Noor Ulfath	My cognitive and Technical assessment was scheduled on sept 14, 2021 and this was the first round in the recruitment process. This was an elimination round, and we have to meet the sectional and subsectional cut off to proceed ahead in recruitment process. I had 90mins to complete 90 questions. Once done you will be notified with the results within 5-10mins. Upon clearing stage 1, I had to participate in coding assessment and these scores will be	I didn't had JAM or GD in Accenture but I had Communication assessment which was the unique round in the recruitment of Accenture. Here in this round you should be strong with communication skills and also listening skills. There were several sub topics in this round like reading, listen and repeat ,	I had my interview scheduled on 17th sept 2021. The questions which were asked to me in interview are as below: 1. Introduce yourself 2. Tell me about your projects. 3. Asked me to explain one of my coding related project in depth. 4. How many members were there in your team? What was your role in the project? 5. Did you face any issues in co-ordinating? I got this question as I told I was leading the team. 6. Did you face any difficulties in completing the project? 7. Can you tell what technical errors you faced in your coding related project? Name the errors? 8. Tell one negative comment which you heard about yourself? What did you do do improve from your negative feedback? Do you have any questions for me?	I am good at "C programming" and "python". I took up "Java" as my open elective subject and learnt basic level in JAVA.	I would like to give some general tips to crack interviews. 1. Make sure you knw each and everything what you have mentioned in your resume. Do not fake anything in your resume 2. Stay confident and work on having good communication skills. 3. Ensure to work on projects as it

		considered for final decisions. I had 45mins to complete 2 coding questions.	story telling etc. which is a pre-recorded assessment by the system.			plays an important role.
3	MONISH A.V	Round 1 of Accenture's hiring process was an Aptitude and cognitive assessment. There were 4 sections which included: Quantitative Aptitude, Logical reasoning, Verbal ability and Questions based on Networking & Cloud computing. It was a test of 90 questions for 90 minutes which included sectional cutoff to clear it. After clearing the aptitude assessment, we proceeded to the coding assessment which consisted of 2 programming questions that we could code in any	In the next 1-2 days we had a communication assessment which was held on the company portal. This wasn't an elimination round but was used to test our reading, speaking, listening and pronunciation skills. It also assesses our attentiveness. This test would last for 20 minutes and was as normal as having a friendly conversation.	The last and final round was the interview. The nature of the interview for this role(Associate software engineer) was purely HR related and general. Initially the panelist will introduce himself to ease you into the interview and then ask you to introduce yourself. The interviewer focussed mainly on the information and skills mentioned in the resume giving highest priority to the projects that you have mentioned. A few of the questions i was asked were : 1) "What kind of problems did you face during your project period and how did you overcome them?" 2) "What was your role in the project?/What was your contribution to the project?" 3) "Do you currently have any ideas for developing an app/interface/software/product into the market?" 4) "Do you have any questions for me?"	During the interview the interviewer also asked me questions like "What is your most/least favourite subject in your curriculum and why?" "Explain to me a certain topic from your subject as you would explain to a person with no prior knowledge regarding the subject" Apart from this there weren't many technical related questions. The technical topics they may ask will be related to your branch	The entire process of accenture placement drive lasted for 4 days in my case but the interview results will be announced late. With beginner level knowledge of any one programming language(to clear the coding questions) any student will be able to get this job role. Once you clear round 1, the subsequent rounds are purely based on your communication and soft skills. Confidence and calmness is the key for cracking the interview round. It is also important to completely know and study every line of your

		preferred programming language. Best way to clear first round is to practice aptitude questions and simple coding questions from previous year Accenture papers.				resume including extra curricular activities.
4	M SAIKIRAN	Basic Aptitude questions were asked	There wasn't any JAM or GD	The interview isn't that much drilling. One must be prepared for some basic HR questions before hand. I was very confident at the start with the introduction itself and kept him engaged with every questions he asked instead of boring him single line answers. I was very through with the project which I did and explained it to him very clearly. The more engaging you keep the more are the chances of selection	They just asked me some basic questions from C and Python as I mentioned them in my resume	The coding and the Aptitude round can be cleared easily but the interview is the game changer. The very first introduction will determine course of the whole interview and lastly being thorough with the project is the must
5	SHASHANK	Aon-Cocubes platform was used for assessment. The aptitude test was moderate and it included questions based on English ability, reasoning and problem solving and pseudocodes.	There was no JAM/GD, but there was a communication test wherein we had to narrate back what the software tells us.	The interview was great. Panelist began by asking for my introduction. On the basis of what I said, many scenario-based questions were asked on my project and team management. Questions on my curricular and extra-curricular activities were also asked.	Basic concepts of OOP and Java/Python is sufficient.	Accenture is a great place to start your career in IT. Basic preparation is enough to crack the exam and interview.

			in your college life, if yes, what was it? And how did you overcome it? Has there been any conflict in project and how did you resolve it?			
7	VARUN G	It consists of total 90 questions in 90 mins which includes 1.Quant 2.Verbal 3.Reasoning If we clear this test they will allow us to CODING SECTION. This section has 2 questions in which we have to run atleast one code successfully.	The next round is communication round. It was non-elimination round I guess, In this round we will get to hear some sentences and stories one by one and we have to repeat or narrate that in same.	My interview was simple and short. It was about 12-15 mins, In my case only one interviewer was there,first she introduced herself and then she asked me to introduce myself. After that she asked to explain my projects in details like whatever I mentioned in resume (even about seminars) that all things was asked to explain briefly, and next some HR type questions like what are the challenges I faced while doing project and my strength, weekness, favourite and least favourite subject in engineering and why. And finally she told me that any questions from your side and I asked 2 questions about the company. And not even a single question on coding languages what I mentioned in my resume like it was all about the projects but in brief.	I mentioned few in resume but interviwer didn't asked a single question from this. Like I mentioned python, C and C++ as a beginner but no questions from these.	They will declare the final result based on overall performance of each round so we have to be cautious in each and every round.
