Ellucian

Sl No.	Name	Aptitude Test	JAM/GD	Interview experience	Technical Subjects	Other Comments
1	Akanksha	In the first round consisted two sections the first section had 20 mcq questions based on sql, oops,basic aptitude questions and some questions on AWS, the second section had 3 coding questions of easy/medium level.	We didn't had any JAM or GD round.	We had two interview rounds technical and managerial. In technical interview the interviewer asked me about my programming knowledge in DSA, OOPs, HTML, CSS, JS and some basic database questions all that I had mentioned in my resume. He even asked me to describe all about my projects what all I used and how it's working. In managerial interview the interviewer asked me some questions like why do you think you are suitable for the job and what do you about the company. There main focus was to check the personality of the person. Both the interviewers were very friendly and I had very good experience.		Stick to your resume all the skills you have mentioned you should have a very good knowledge of it. They ask many questions from your project your role and contribution in it so be prepared for that. In interview just try to be calm listen to their questions properly think and answer patiently.
2	Amit Kumar	There were 10 multiple choice aptitude questions in round 1.	NA	There were 4 rounds overall: Round 1 consists of 3 coding questions and 20 MCQ. Coding questions – Pal Prime number with lowest time complexity. Round 2 was technical round Questions were asked on Java, Data structures, linked list, object oriented programing concepts, SQL queries, some basic coding questions like prime number and reversing a linked list. Round 3 was managerial round where they asked me	1.Java 2.Data base management system 3.Data Structures 4.SQL Queries 5.Java Collection framework 6.Project	

				questions on my project and how I have used object-oriented programing concept in my project code base, and I was also asked some behavioral and situation-based questions such as strength and weakness, handling challenging situations, etc. Round 4 was also a managerial discussion where I was asked some questions on my final year project and my contribution in it and discussed about the technologies I want to work on and the technology Ellucian is working on.
